

A PAID Productions Product

Problem

- 📁 Wasn't easy for consumer to research nutritional value of foods
- 📁 Data was inconvenient to search and store

The Solution

- 📁 A clean, user friendly experience
- 📁 Login to site, search, and save data
- 📁 Shows closest store with grocery items

Steps to Build

- 📁 Discussed viable features (nutritional values, prices, location, etc)
- 📁 Decided what features were most realistic, needed and possible
- 📁 Found API's that would return the data types we needed
- 📁 Created a rough sketch of how the site would appear, and how it would function/change
- 📁 Divided into teams to focus on front end & back end
 - 📁 Front end built design, back end built JavaScript and interactivity with other sources
